

SAP Business One for Chemical Manufacturing

1  **Advanced Formula & Production Management**
Create complex formulas, manage BOMs & routings, and streamline production processes for consistent quality and efficiency.

2  **Real-Time Inventory & Batch Traceability**
Track raw materials, in-process and finished goods in real time with full batch traceability and shelf-life management.

3  **Multi-Unit Measurement & Conversion**
Manage multiple units of measurement and automatic conversions across raw materials, processes & finished products.

4  **Production Planning & Cost Control**
Plan production efficiently, optimize resources, and monitor costs in real time to improve profitability.

5  **Quality & Compliance Management**
Ensure product quality and safety with built-in QC processes, certifications, and regulatory compliance management.

6  **Research & Development Integration**
Manage R&D activities, trial formulations, and lab results seamlessly and accelerate innovation to market.

7  **Integrated Business Processes**
Unify finance, sales, procurement, production, inventory & quality in one integrated platform for better visibility, collaboration & decisions.
